Blackjack User Manual

1. ## Getting Started

   First you will need to install any python 3 environment. Information on installation can be found here: https://www.python.org/downloads/

2. ## Getting the Files

   Now that you have your python 3 environment installed you will need to navigate to a directory that you are comfortable adding some new files to. Navigate here and pull the files down from the GitHub with you're preferred method, cloning, downloading etc. → https://github.com/CSC305/s20p2q

3. ## Running the Files

   Now that you have all the files in the same directory and have a working python 3 environment, you should now be able to run the game. Open the blackjack.py file and run it.

4. ## Playing the Game

   At this point, you should have a working round of blackjack and should just follow along with the user prompts. Rules can be found in the game

   ### Important Notes:

   Some python environments come with preinstalled pip packages and some do not. If yours does not and you have unrecognized imports this documentation should help → https://pip.pypa.io/en/stable/reference/pip_install/
